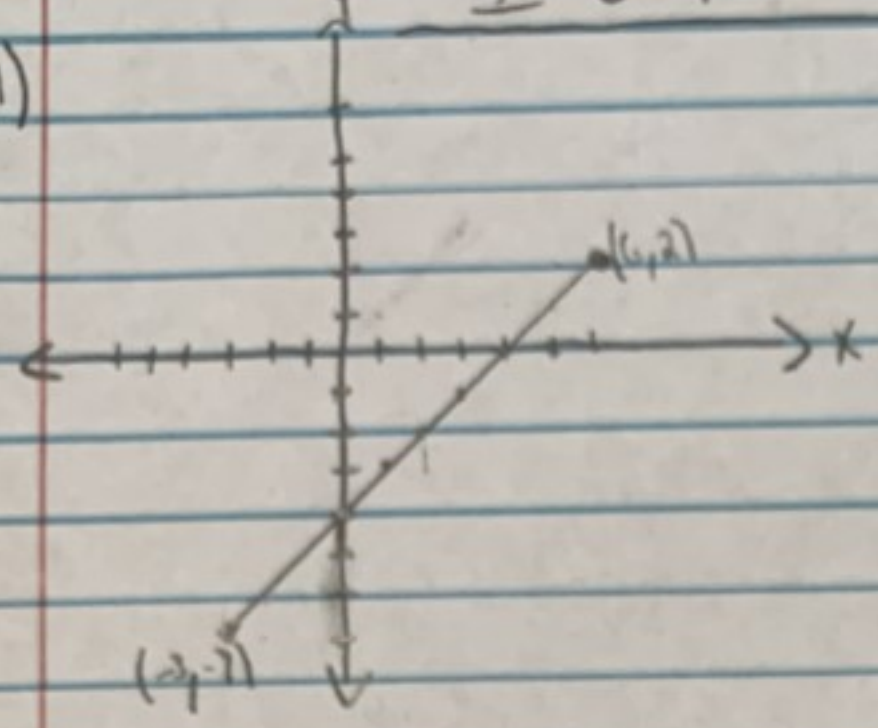
Trent Walker

IVT Task

1)



$f(x) = x - 4$
$[a,b] = [3,5]$
$f(a) = -1$
$f(b) = 1$
$y_0 = -4$
$f(x_0) = -4$
$x_0 = 0$

2) It helps me see that it is a function because it passes the vertical line test. Also, when I plug in any number above 3 I get positive numbers in return.

3) I think the biggest thing that would help me understanding is an example with all these things defined. Also, if they could explain it in English that would be nice. Im joking, but more layman's terms would be nice.
